

Day 21 – 1 August 2025 (Friday):

Presentation and Closure

The final day of the internship was dedicated to **presentation and closure** activities. I delivered a comprehensive **presentation showcasing all three projects** — the **Feedback Analyzer**, **Mental Health Support Bot**, and **Automated Search Bot**. Each project was explained in detail, including its objectives, architecture, implementation workflow, and key outcomes.

During the session, I demonstrated live functionalities wherever possible, such as automated feedback sentiment classification, empathetic conversation flow in the Mental Health Bot, and autonomous web search and summarization. The mentor, **Mr. Paramveer Nandal**, provided **constructive feedback** on workflow efficiency, clarity of presentation, and the innovative aspects of the projects. Suggestions were offered for minor improvements, particularly in enhancing user experience and documenting AI prompts for future scalability.

This day also included discussions on **lessons learned, challenges overcome, and skill growth** throughout the internship. It highlighted the importance of not only technical proficiency but also the ability to **communicate complex concepts effectively**, answer questions, and justify design decisions in a professional setting.

Learning Outcome:

Gained experience in **professional technical presentations** and effectively communicating AI project workflows and results. Learned to showcase projects confidently, receive feedback positively, and articulate complex automation and AI concepts to mentors and peers.
